

Sprint-1 [Day-2]

N traversal

Description

You are given a matrix of size $n \times n$. Find the **N**traversal of the matrix. Refer the following figure for better understanding.

o/p
7, 4, 1, 5, 9, 6, 3

Input

The first line contains T , the number of test cases. The first line of each test case contains N , the size of the square matrix.

Next N lines contain N space separated integers, denoting the values of the matrix.

Z Traversal

-13:21:21

Description

Given a square matrix of size N x N. Print the Z traversal of the matrix. Refer the figure given below for better understanding.

o/p
1 2 3 5 7 8 9

Input

The first line of the input contains T, the number of test cases. The first line of each test case contains N, the dimension of the square matrix.

Next N lines contains N space separated integers, denoting the values of the matrix.

Constraints

$$1 \leq T \leq 10$$

$$1 \leq N \leq 500$$

$$1 \leq A[i][j] \leq 1000$$

✎ Edit

Description

Given a square matrix, you have to find the reverse U traversal of the matrix. Refer the sample I/O for better understanding. Refer the given figure for better understanding.

Note: No element should be visited more than once.
